

RESEARCH INTERESTS

My primary research goal is to solve practical problems through advanced AI systems capable of understanding, generating and reasoning with high-dimensional data across diverse modalities. With this goal in mind, I am currently working on **Generative Modeling** and **Representation Learning** as well as their applications in data generation, multi/cross-modal Learning and few/zero-shot learning.

Specifically, I am also interested in or working in the following subjects:

- **Deep Generative Models** and its application on downstream tasks.
- Multi/Cross-Modal representation learning
- Graph representation learning.
- Few/Zero-shot learning and domain generalization.
- Topic modeling.
- Any interesting machine learning theory that can apply to solving practical problems.
